87				115	116									<p>where which way its coming in Doncaster road then usual route up busstation road then ridge way then down to go onto hornthorpe valley road onto far lane back onto Doncaster road. if this is so the route is fine but the amount of buses missing on 115 of late not back if it makes things better. we want less cancellations of buses especially in evening when services are less frequent</p>	<p>this is brilliant that this services has been reversed back onto Doncaster it helps take pressure off 115 of recent months and gives people more opportunity to visit and dine working mens club from Thryburgh. me personally it helps me get to my partner easier from the east dene area</p>					all said in previous boxes

96																					<p>You are looking to increase the X1 AND X10 service but why can't you do this to around that area of the network and not to increase around this area. You have cut over enough a whole community off around to get into a bus but increase services on the X1 AND X10 who already have plenty of buses.</p>

102								X2													<p>The X2 has taken over the bus that served Pt of Chapelate road south of Thousin street. Torso and Bonyay street. People have to cross Meadowbank road which is very busy and someone is going to get killed as we are hospital. A small bus could be put on the route if only for one every hour or so, as a lot of people have become housebound. We know it is difficult to get round Pt 56, but there has always been a bus on that route, hope you can do something for us (Rotherham).</p>
